Professional Summary

Passionate CSE student with interests in software development, artificial intelligence, data engineering, cloud technologies, and modern web applications. Skilled at transforming ideas into scalable, user-centric solutions through clean architecture, efficient system design, and modern development practices. Enthusiastic about learning emerging technologies, solving real-world engineering challenges, and building impactful products across diverse technology domains.

Education

Kalpataru Institute of Technology

B.E. in Computer Science and Engineering, CGPA: 8.73 (current)

Tiptur

Sept 2023 – Present

- Relevant Courses: OS, Data Structures, Algorithms, Files & Databases, OOP, Cloud Computing, DevOps, Cybersecurity

Technical Skills

Languages: CSS, HTML, Python, Java, JavaScript, TypeScript, SQL, C

Frameworks & Technologies: React.js, Next.js, Node.js, Express.js, FastAPI, Selenium, JUnit, REST APIs, TensorFlow, PyTorch, Scikit-learn, LangChain

Databases & Data: MySQL, PostgreSQL, MongoDB, Apache Spark, Pandas, NumPy, Power BI

Cloud & Tools: Git, GitHub, Docker, AWS, Azure, CI/CD, ML, LLMs, RAG, Agentic AI

Experience

Croevo AI

March 2026 – Present

Frontend Design and Developer Intern

Off-Site

- Developed responsive and scalable user interfaces using modern frontend technologies, improving overall user experience and engagement.
- Built and optimized reusable UI components, ensuring clean code practices and enhanced performance across devices and browsers.
- Collaborated with cross-functional teams to translate design concepts into functional features, delivering efficient and user-centric web solutions.

Projects

Liveability Scoring System | *Apache Airflow, Streamlit, PostgreSQL/PostGIS* | **Live Link**

March 2026

- Built a full-stack AI-powered platform integrating 6+ civic datasets (crime, AQI, transit, satellite data) using data pipelines and REST APIs, enabling real-time data processing and visualization.
- Engineered scalable PostgreSQL/PostGIS backend with spatial queries and joins to generate ward-level insights for 100+ regions, enabling ML-ready datasets, XGBoost predictions, SHAP explainability, and interactive dashboards.

GenomeRAG | *LangGraph, PyTorch, DEAP, Qdrant*

July 2026

- Engineered an evolutionary memory framework for 500+ autonomous AI agents, optimizing 10 memory genome parameters (forgetting, episodic, semantic, confidence, compression, etc.) across 100+ generations using genetic algorithms.
- Improved long-horizon reasoning accuracy by 18–25% while reducing memory retrieval latency by 35% compared with fixed-memory RAG baselines through adaptive memory evolution.

Reddit InsightForge | *MinIO (S3), Docker, Streamlit* | **Live Link**

Feb 2026

- Built an end-to-end Reddit analytics pipeline (Bronze → Silver → Gold) using Python, Pandas, MinIO, and Docker to transform raw JSON into optimized Parquet datasets.
- Developed and deployed an interactive Streamlit dashboard with KPI metrics, filters, and dynamic visualizations integrated with cloud-based object storage.

Achievements / Extracurricular

- Cisco CWiCS India BOOST Program** (May 2026) — Selected among eligible engineering students for Cisco's competitive 45-day cybersecurity training program covering network security, automation, and cloud technologies; program offers top performers internship opportunities at Cisco.
- Infosys Springboard Internship 7.0** (May 2026) — Shortlisted for a virtual internship after successfully clearing prerequisite courses and a video-proctored assessment on the Infosys Springboard platform out of a large applicant pool.
