EDUCATION

Kalpataru Institute of Technology | Tiptur

Sept 2023 - Present

B.E. in Computer Science and Engineering CGPA: **8.72** (current)

Relevant Courses: Operating Systems, Data Structures, Algorithms, Files & Databases, OOP, Cloud Computing

TECHNICAL SKILLS

Languages: C, Java, JavaScript, Python, SQL, TypeScript

Technologies: Flask, Git, Node.js, PyTorch, sklearn, Tensorflow, Streamlit, React.js, REST APIs

Tools: Github, Apache Spark, Jupyter Notebook, MySQL, Docker

AREAS OF INTEREST

- Designing and building scalable data pipelines, including data ingestion, transformation, and orchestration across distributed systems.
- Working with big data technologies like Apache Spark, Kafka, and cloud-based data platforms to manage, optimize, and process large-scale datasets.
- Focused on full-stack web development, building responsive user interfaces, robust back-end services, and RESTful APIs. Enjoy working with databases to create scalable, secure, and maintainable web applications.

CERTIFICATIONS

- | | |
|---|-----------------|
| • Data Engineering Course Online - With Hadoop and Spark course by GeeksforGeeks Link | Feb 2026 |
| • Data Analytics with Python course by NPTEL and IIT Roorkee | Apr 2025 |
| • Full Stack Developer Bootcamp - Master Frontend to Backend course by GeeksforGeeks | Feb 2026 |

EXPERIENCE

[Croevo AI](#)

Frontend Design and Developer Intern

March 2026 - Present , Off-Site

- Developed responsive and scalable user interfaces using modern frontend technologies, improving overall user experience and engagement.
- Built and optimized reusable UI components, ensuring clean code practices and enhanced performance across devices and browsers.
- Collaborated with cross-functional teams to translate design concepts into functional features, delivering efficient and user-centric web solutions.

PROJECTS

Liveability Scoring System | Apache Airflow, PostgreSQL (PostGIS), XGBoost, Streamlit

March 2026

- Built a full-stack AI-powered platform integrating 6+ civic datasets (crime, AQI, transit, satellite data) using data pipelines and REST APIs, enabling real-time data processing and visualization.
- Designed and implemented a scalable backend with PostgreSQL + PostGIS, performing spatial queries and joins to generate ward-level insights for 100+ regions.
- Enabled machine learning insights by preparing feature-rich datasets for KMeans clustering, XGBoost prediction, and SHAP-based explainability, powering an interactive Streamlit dashboard.

StockSense AI Engine | FastAPI, PostgreSQL, MLflow, FinBERT

March 2026

- Architected a real-time investment intelligence platform processing multi-source financial data using Kafka, Spark Streaming, and Airflow, enabling continuous data ingestion and analysis.
- Developed and deployed machine learning models (XGBoost, LSTM, FinBERT) with MLflow tracking and FastAPI endpoints for stock prediction, forecasting, and sentiment analysis.

Reddit InsightForge | MinIO(S3), Docker, Streamlit | [Link](#)

Feb 2026

- Built an end-to-end Reddit analytics pipeline (Bronze → Silver → Gold) using Python, Pandas, MinIO, and Docker to transform raw JSON into optimized Parquet datasets.
- Developed and deployed an interactive Streamlit dashboard with KPI metrics, filters, and dynamic visualizations integrated with cloud-based object storage.
